2024 Gold Price Trend Report

USD per troy ounce, month-end close basis

Year-start	Year-end	Range high	Range low	YTD change
$2,039.15	$2,624.60	Oct $2,746.70	Jan $2,039.15	+28.7%

Figure: Month-end closing prices. For readability, only year-start, year-end, high, and low months are labeled.

I. Annual Overview

2024 was a textbook trending bull market: prices broke above $2,200 in Q1, kept climbing through Q2 and Q3, then settled near $2,746.70 at end-October before pulling back from the highs.

Month-end closes rose from about $2,039.15 in January to about $2,624.60 in December—a gain of roughly 28.7% for the year.

Drivers clustered around continued central-bank buying, rate-cut pricing, geopolitical uncertainty, concerns over the dollar's credit and fiscal backdrop, and improved gold ETF/investment demand.

According to the World Gold Council: the 2024 LBMA PM gold price set 40 fresh highs over the year, the annual average was about $2,386.2/oz, up roughly 23% year over year, and the Q4 average was about $2,663/oz.

II. Phase-by-Phase Changes

Phase	Moves and main drivers
Jan–Feb	Gold range-bound above $2,000 as markets waited for a clearer Fed rate-cut path.
Mar–May	Breakout underway; March month-end already near $2,231.56, May near $2,327.28.
Jun–Sep	Consolidation at elevated levels, then another push higher; September month-end reached about $2,664.41.
Oct–Dec	October month-end near $2,746.70 marked the phase high; prices eased slightly in November–December but stayed elevated.

III. Monthly Data Table

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Month-end close	$2,039.15	$2,044.20	$2,231.56	$2,285.99	$2,327.28	$2,326.72	$2,409.69	$2,503.38	$2,664.41	$2,746.70	$2,651.25	$2,624.60
